

Grade 10 Physics Unit 1 Vector Quantities

1.1 Scalars and vectors

By the end of this section, you should be able to:

- define scalar and vector quantities;
- describe the difference between vector and scalar quantities;
- list some scalar and vector quantities

1.2 Vector representation

By the end of this section, you should be able to:

- identify the magnitude and direction of a vector;
- discuss how vectors can be represented algebraically and graphically;
- discuss about the different types of vectors.

1.3 Vector addition and subtraction

By the end of this section, you should be able to:

- explain how to add and subtract vectors;
- define the term resultant vector.

1.4 Graphical Method of Vector Addition and Subtraction

By the end of this section, you should be able to:

- describe the graphical method of vector addition;
- use the graphical method of vector addition to solve problems

1.5 Vector resolution

By the end of this section, you should be able to:

- resolve a vector into horizontal and vertical components;
- find the resultant of two or more vectors using the component method.
